PATRICK DONAIS

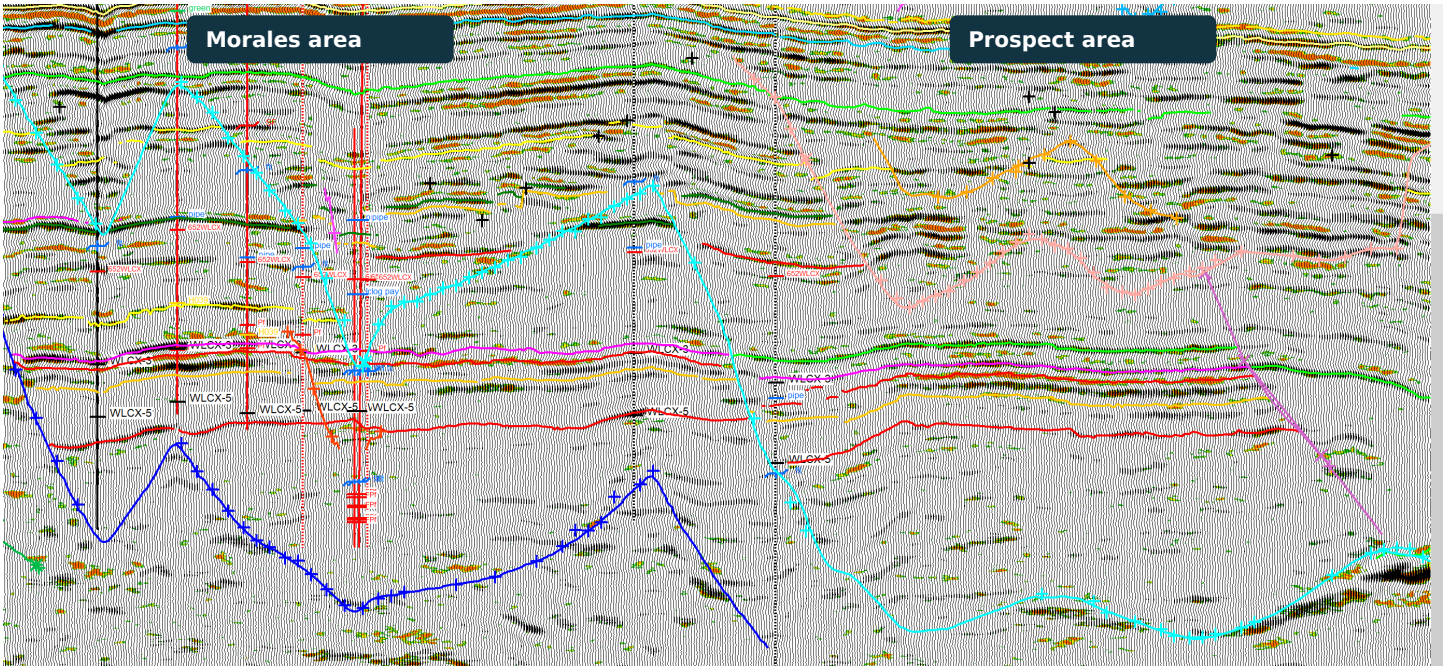

BRUSHY CREEK SOUTH

LOWER WILCOX PROSPECT

Untested upthrown closure | Jackson County, Texas

An undrilled Lower Wilcox opportunity supported by integrated structural interpretation, conditioned seismic and AVO comparison with nearby production.

01 STRUCTURE + SEISMIC RESPONSE

Interpreted seismic section with intercept × gradient in color. The prospect occupies an upthrown fault block with an AVO response compared with the productive Morales interval.

02 THE CASE FOR A CLOSER LOOK

Structural position

Untested closure interpreted from 3D seismic and well control.

Production analogy

Class 3 AVO character compared with nearby Lower Wilcox gas production.

Reservoir potential

Early trapping and porosity preservation form part of the geological interpretation.

Detailed seismic, well comparisons and prospect terms available for technical discussion.

Interested? Let's discuss Brushy Creek South.
