UNOMIN-ECHO YEGUA PROSPECTS

Multiple undrilled opportunities | Wharton County, Texas

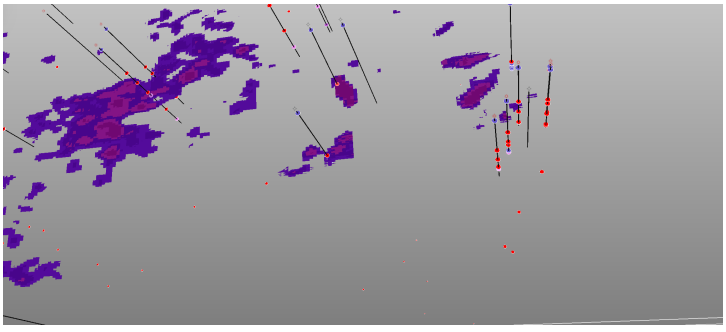

Several Yegua targets identified through integrated 3D seismic and well interpretation. Conditioned prestack gathers, AVO evaluation and additional neuron analysis support the prospect interpretation.

01 SEISMIC EVIDENCE

Conditioned seismic with intercept x gradient color overlay. The reference-well relationship and undrilled target responses form the basis for further technical review.

02 ADDITIONAL NEURON SUPPORT

Geological interpretation leads.

Selected Paradise neuron bodies provide an additional comparison of seismic character within the interpreted Yegua interval.

Well control and AVO evidence remain central to evaluating the targets.

Interested? Let's discuss the prospects.
